

C3

- o impairment of capacity to get rid of affected cells owing to protective sheath surrounding tumor cells and overtaxing of absence of an adequate immune response, enzymatic activity, and detoxification capacity of body

C3

- o respiration of affected cells changes toward fermentation

C3

- o impairment of metabolism with breakdown in carbohydrate metabolism with accompanying impacts on essential body systems

C3

- o increasing vascularization of the tumor with attendant enhancement of the nutritional status of tumor cells

AC3

- o enhancement of capacity to get rid of affected cells which can be stimulated by the use of proteolytic enzymes to help break down protective sheath stimulating or otherwise enhancing the host's immune response, enzymatic activity, and detoxification capacity

AC3

- o return to normal oxygen respiration

AC3

- o return to normalization of carbohydrate metabolism with return to normalization of metabolism generally

AC3

- o normalization of vascularization with attendant decrease in nutritional status of tumor cells
